

Link your incoming paper documents to Sage 50 or 200 as you process

Have you heard the news?

You can now scan and store your documents through Sage!

NEW Sage/Invu integration provides a simple effective solution for the filing of your accounting documents.

Don't worry about learning another package just use the integration to scan and store your documents.

- Filing is done automatically
- Documents are safe and secure
- View them at your desk in Sage
- Saves space
- Saves time

Return on investment calculations vary from business to business but GRS Inns removed the need for another warehouse to store weekly returns and saved in excess of £25k per annum, plus the additional time it would have taken for staff to travel to and from the additional document storage location. An easy calculation to make in this case but the

principle is the same with anyone dealing with paper. Statistics state that between 15-20% of admin time is spent filing and looking for documents!

Chris Thornton from GRS said:

"We were contemplating leasing larger premises to store all of our paperwork that we

receive on a daily basis, but we found another solution, With Invu now installed we save time and money on storing invoices and weekly returns. Invu also provides us with instant access to documents online. Any member of staff can locate documents with minimal effort rather than needing to resort to hard copy files"

Example Invu Project Price:		5 users

The missing piece...

Invu Document Management Integration for Sage 50 & 200

Typical clients and markets:

All

Systems Requirements:

Sage 50 or Sage 200 with Invu

Solutions for:

Sage 50

Sage 200

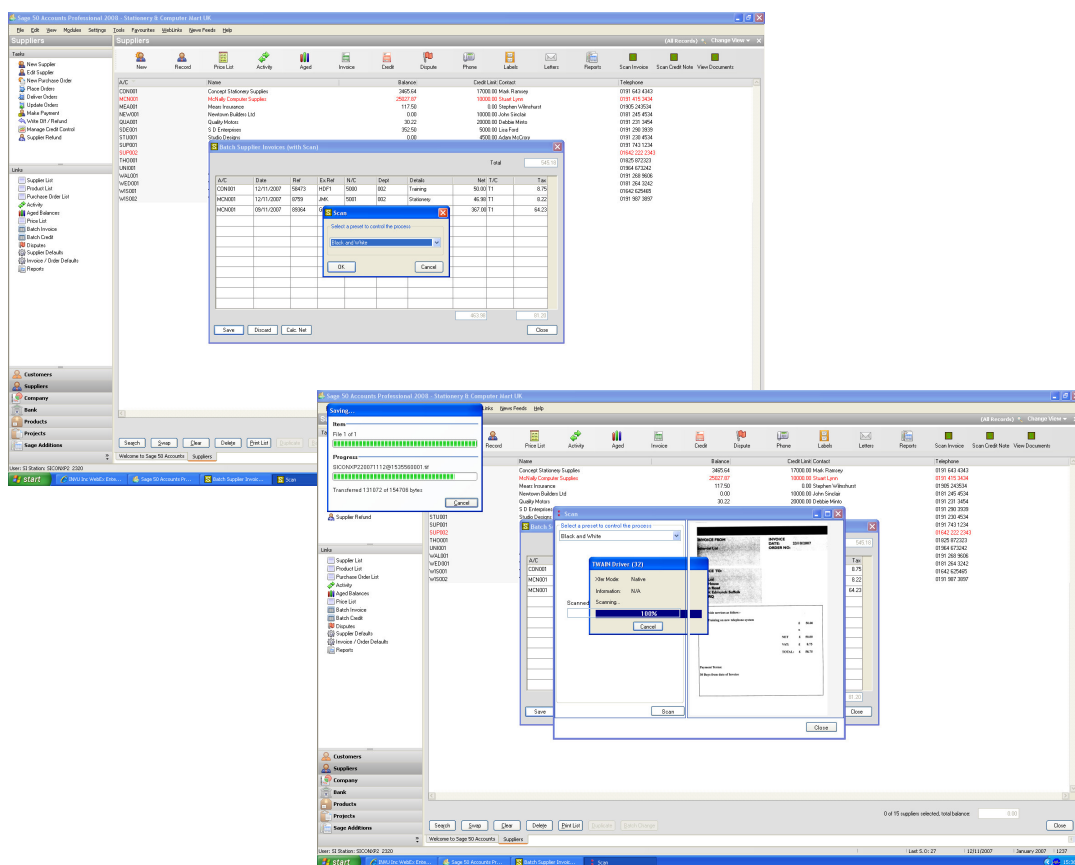

Product Overview

Sage 50 & 200 do not provide a simple solution for the linking of incoming documents such as delivery notes, purchase invoices, technical product documentation with version amendments, and signed proof of delivery documents.

The Invu integration with Sage 50 & 200 allows incoming documents to be scanned, indexed and filed into the Invu document management system at specific points within the program. New buttons have been added to allow documents to be scanned after goods are received and purchase invoices are processed. New buttons have been added to transaction history views to allow these documents to be retrieved from within the Sage products with no need to access Invu to make an additional search.

Outgoing documentation can also be automatically captured using Draycir Spindle and then sent into Invu allowing for the complete business process documentation to be captured in one place.

These developments allow individuals within an organisation to obtain rapid access to the documentation they need, easily and quickly.

Key features and business benefits

- Linking of incoming documents such as delivery notes and purchase invoices within the Sage applications
- Retrieval of documents from within the Sage application
- Automated processing of documents such as Proof of Delivery documents
- Disposal of original documents is now a real option - revenue approved application
- Low cost per user, typical ROI within 6 months
- Huge saving in time and space, and confidence that you can find documents quickly
