DR-2010M DR-2510M

Workgroup scanners.

HIGH SPEED, HIGH QUALITY – FOR MAC USERS.

you can

Small on the desktop. Big on performance.

High speed, simple to use scanners are important for workgroup productivity, whatever IT platform you use. Now our latest space-saving desktop colour scanners – the DR-2010M and DR-2510M – bring Canon's unrivalled performance and exceptional reliability to Mac users.

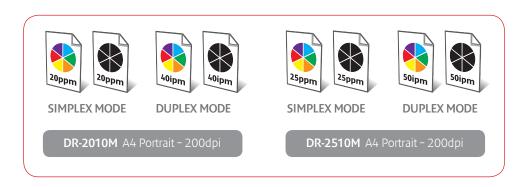

Compact design, large performance.

While delivering exceptional performance, the compact, space saving design of the DR-2010M and DR-2510M ensure efficient use of workspaces. The scanners have a strong robust design, built to handle up to 1,500 pages a day – ideal for peak periods.

Productivity, at the speed you choose.

The DR-2010M and DR-2510M provide the fastest, most economical and effortless way to capture paper documents and increase productivity in the office.

Using Canon's innovative CMOS CIS image sensor technology, the DR-2010M and DR-2510M scan at the same highly productive speeds, whether your documents are black-and-white, greyscale or colour. For easy, one push ad hoc scanning, the DR-2010M offers fast colour scanning of 20 pages per minute (40ipm for duplex) with the robust DR-2510M, ideal for mission-specific scanning, providing scan speeds of 25 pages per minute (50ipm for duplex).

Canon's innovative technology ensures that the scanners are up to 50% more efficient than the competition.

Higher image quality keeps you in the picture.

However variable the types of documents to scan – whether they are on rough textured paper or the text is faint – the scanned result will be of the highest quality. Both scanners have an optical resolution of 600dpi as well as a range of outstanding features, including Auto Page Size Detection and Deskew, Automatic Colour Detection and Text Orientation, saving time by reducing time spent pre-sorting documents or adjusting settings. Just load a batch of documents and let the scanner go to work.

Energy efficiency savings built-in.

We understand how vital it is to save energy – and reduce costs – where you can. The DR-2010M and DR-2510M help with both. Energy Star compliant, Canon's innovative technology ensures that the scanners are up to 50% more efficient than the competition. The scanners can also be automatically switched on or off in line with the Mac they are attached to – so they can't be left on accidentally – helping to reduce overall energy consumption.

Sizeable capabilities - at a touch.

As documents don't come in standard sizes, the DR-2010M and DR-2510M are well prepared to cope, with a straight-through slanted paper path to provide trouble-free scanning. From thin and thick, to embossed media including business cards, photographs and A3 documents (in folio mode) they can scan mixed document types with no special preparation. Ultrasonic double feed detection on the DR-2510M also provides more reliable document handling.

Versatile applications.

For greater plug-and-scan productivity and flexibility the DR-2010M and DR-2510M have three customisable job buttons and powerful applications that make scanning easier.

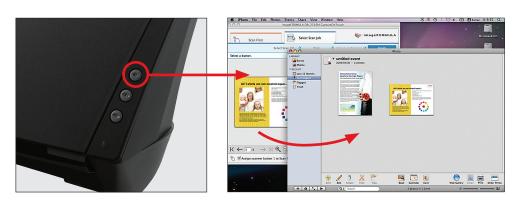

TWAIN Driver – the bundled TWAIN driver readily connects with Mac applications, such as iPhoto and ImageCapture enabling seamless connectivity.

CaptureOnTouch – boosts users productivity with easy and effective scanning operation. Two simple scanning methods are available:

- Scan First the user scans a document first before selecting the file format and destination.
- **Select Scan Job** used for the quick and easy execution of routine scanning tasks where all scanner and file-saving settings have been pre-configured, improving scan efficiency and accuracy.

Presto! PageManager – is simple but powerful filing software that enables you to store, organise and edit your digital documents.

Presto! BizCard Reader – quickly and easily converts vital contact information on business cards into a convenient, searchable digital database that can be easily synchronised between desktops, laptops, iBooks, PDAs and PIMs.

The scanner job buttons can be used to easily send scanned images through CaptureOnTouch software directly into iPhoto (Mac application).
